

HEADACHE DISORDERS & NON-MEDICAL SWITCHING

Treating migraine disease and headache disorders sometimes involves **INNOVATIVE MEDICATIONS** such as CGRP inhibitors.

THROUGH NON-MEDICAL SWITCHING, health insurers swap a stable patient's CGRP inhibitor just to protect profits.

Like patients, **CGRP INHIBITORS ARE NOT ALL THE SAME.**

The switch can lead to:

Increased anxiety or pain

Unchecked symptoms

Disease progression

PATIENTS NEED CONSISTENT, COMPREHENSIVE COVERAGE to maintain the treatment that works for them.
